

KODAK i3000 Series Scanners Raise the Bar on Productivity for Desktop Capture with Powerful Features and Compact Size

Rochester, N.Y., January 22 2013 - The all-new KODAK i3000 Series Scanners redefine business productivity for desktop document capture with ease of use that harnesses the power and performance once reserved for scanning environments with dedicated operators. A compact and unique design optimizes the KODAK i3200 Scanner and KODAK i3400 Scanner for use in any office environment with business processes that require robust data extraction from paper documents.

"With a small footprint of just 17" x 15", these compact A3 desktop scanners pack a powerful punch that delivers greater productivity for any desktop user," said Budd Webster, Business Director for Scanners and Document Imaging Category Management. "Affordable and capable, the i3000 Series Scanners help businesses gain control over manual, paper-based processes and integrate them into existing workflows that improve the way professionals capture, share and distribute information within their organization."

User functionality is supported by a graphic user panel that displays messages that relate to job name or job status. Businesses may customize these messages to request additional action related to scanned documents. Software integrators and providers can also use the intuitive feature to simplify how their application works with the scanners by displaying job shortcuts assigned to preconfigured settings such as color, file type and file destination. The i3200 Scanner and i3400 Scanner are compatible with TWAIN, ISIS and Linux-based applications for easy setup and integration into existing scanning programs.

"Growing demand to convert paper to digital is expanding beyond the traditional integration into business processes to include line of business," said Ron Glaz, Research Director, IDC. "IDC believes that Kodak's recently introduced scanners are well positioned to capture these opportunities."

The i3000 Series Scanners (http://youtu.be/Ah9_5s_orhg) combine heavy-duty document handling with advanced image enhancement capabilities through Kodak's Perfect Page technology, which makes them some of the most productive offerings in their class. The i3000 Series Scanners consistently produce high-resolution images from color, black-and-white, simplex or duplex scans processed at 200 or 300 dots per inch (dpi) at throughput speeds of up to 80 pages per minute (ppm). Equipped with a 250-sheet feeder/elevator, the i3200 and i3400 each handle documents from a reliable paper transport that optimally positions documents for maximum image clarity as they are captured by the scanners' imaging cameras. Dual LED illumination also aids in providing image clarity and color stability as well as quick scanning starts.

Users also benefit from the versatility of two paper path options. The i3000 Series offer a traditional front exit or an optional rear exit on the back of the scanner. This functional choice gives users the flexibility to select the best method of paper transport according to a document's length and thickness. The i3200 Scanner and the i3400 Scanner also support both the KODAK Legal Size Flatbed Accessory and the KODAK A3 Size Flatbed Accessory to handle additional media options. The i3000 Series Scanners can also attach to a post-scan rear-side imprinter.

The i3000 Series Scanners include Kodak's Intelligent Document Protection feature, which extends the paper jam protection provided from Kodak's Ultrasonic Multi-Feed detection. The new capability helps protect documents from physical damage by automatically pausing the paper transport and allowing the user to take appropriate action if the scanner detects the start of damage to a document.

Kodak offers a portfolio of protection plans that help to maintain the performance of the scanners for content management environments and other priority business workflows. KODAK Essential Productivity Services and KODAK Advanced Proficiency Services help businesses protect their investment and generate added value from enhancements in operational efficiencies.

Kodak is a global advisor and provider of integrated services to help companies transform and optimize their businesses. Through a network of service professionals in more than 120 countries, Kodak provides technical, professional, consulting and managed services to enable customers to focus on growing their businesses, maximizing productivity, and more effectively managing risks. All KODAK Products and Software are backed by KODAK Service and Support.

About Kodak

As the world's foremost imaging innovator, Kodak helps consumers, businesses, and creative professionals unleash the power of images, information, and printing to enrich their lives.

Kodak enables customers to capture and use valuable information from electronic and paper documents. Our document imaging solutions include award-winning scanners and capture software, an expanding range of professional services and industry-leading service and support. From small offices to global operations, Kodak has the right solution to feed your business the information it needs.
