

KMWorld Recognizes Kodak Alaris for “Trend-Setting” Information Management Solutions

ROCHESTER, N.Y., October 2 – KMWorld, a popular business and technology publication focused on document, content and knowledge management, has recognized Kodak Alaris Information Management for its trend-setting portfolio of solutions. The global solution provider, which recently launched the Alaris IN2 Ecosystem to help take the complexity out of information capture, was recognized for its ability to support digital transformation, inject insight into business decisions, streamline internal processes and help customers meet revenue goals.

Each year, KMWorld identifies a host of technologies it deems “trend-setting” in the broad sphere of knowledge management. “Our 2017 KMWorld Trend-Setting Products result from innovation and imagination, as well as from evolution,” says Sandra Haimila, Editor of KMWorld. “The products reflect the ingenuity of the developers and the diversity of invention. More than anything else, the 2017 Trend-Setting Products have captured our attention because of their ability to meet business needs by transforming information into insight.”

Delivering on the promise

The Alaris IN2 Ecosystem offers an integrated approach to information capture, helping businesses, governments and healthcare systems make sense of their data, achieve compliance, and create transparency and efficiency throughout their organizations.

New additions to the IN2 Ecosystem include:

- **Alaris S2000 Series Scanners** – Two USB-connected models (Alaris S2050 and S2070) and two network/wireless models (Alaris S2060w and S2080w), which increase productivity by automating much of the work traditionally done by people and host computers.
- **Alaris Capture Pro Software v5.5** – The next generation of award-winning capture software tightly integrates with Alaris and Kodak scanners. Capture Pro Software offers flexible and powerful batch capture, ensuring security and reliability without depending on internet connectivity for scanning and processing.
- **Alaris Info Input Solution and Info Input Express** – Web-based and mobile capture applications that enable effortless information capture from scanners, smart devices, and digital files from one application. Info Input Express Limited Edition is bundled with every Alaris S2000 Series Scanner.
- **Alaris Partner Program** - Partner and developer communities play a vital role in the IN2 Ecosystem through their ability to connect, configure and create new solutions that meet customer needs.
- **Managed Content Services (MCS)** – MCS helps organizations by providing a better understanding of total imaging costs, improving service level agreements (SLAs), and driving savings to maximize the efficiency and power of the total capture environment.

“Today’s complex data environment requires an integrated approach to information capture, including industry leading scanners, software, and services, plus a global network of trusted partners,” said Siddhartha Bhattacharya, Vice President, Global Marketing, Alaris Information Management. “Making KMWorld’s trend-setting products list is an excellent proof

point that we understand our customers' challenges and are well positioned to deliver on our promise to turn data chaos into business opportunity."
