

Empowering greater productivity, efficiency, access and savings

Document Imaging Solutions for Government from Kodak

Today, the most widely used scanning solutions in the government sector come from Kodak.*

Kodak understands the key concerns and critical aspects of government operations today, and delivers solutions targeted to address your most pressing needs:

- > **Doing more with less** – we help you streamline the costs associated with paper-based processes
- > **Online, not “in line,” access** – by enabling smarter, faster, more efficient eGov access, we help you provide more information online via the Web, while reducing the number of people standing in line in department offices
- > **Integration with cloud-based solutions** – achieve more rapid deployment and reduce infrastructure requirements while benefiting from significant savings
- > **Enhancing Microsoft SharePoint** – Kodak Products provide extensive and easy integration with **SharePoint**, while streamlining your interaction and adding powerful, new document imaging, editing and collaboration tools to the **SharePoint** experience
- > **Greater transparency** – make critical information available to constituents, the public and internal customers more quickly, securely and cost-effectively to better serve your public
- > **Gaining faster access to information** – to make informed decisions and speed critical processes
- > **Achieving bottom-line advantages** – including faster ROI and specific pay-as-you-go options, potentially eliminating upfront investment requirements
- > **Reducing needs for human interaction** – automate processes and minimize human interaction, permitting reallocation of personnel
- > **Lessening frustration and process errors** – reduce and eliminate paper to gain advantages including fewer misplaced documents, lower file-space requirements, faster and simultaneous secure document access, enhanced disaster recovery capabilities, greater document security, and beyond

We didn't just arrive in the document scanning and management arenas; we bring a rich heritage of innovation, performance and intelligent answers for the benefit of government entities.

Extensive experience

Kodak is acknowledged as a pioneer and world leader in imaging, with over 130 years of expertise... from George Eastman and his first camera to building space telescopes for NASA. Over 80 years of microfilm – and 20+ years of electronic – imaging provides us with the background and credibility to create smarter solutions for government.

Smart partnerships for better solutions

Our extensive network of ISVs, Authorized Resellers and certified Service Bureaus allows you to utilize our hardware, software and service as part of a smarter overall document imaging solution, customized by local providers to your exact requirements. It's personalized attention – for everything from new installations to conversion services – that transforms years of backfile records into digital documents.

Outstanding image quality

We understand the critical nature of government documents and are the only capture vendor to offer both Perfect Page technology and **Kofax VRS** on our production scanners. These technologies significantly enhance image quality, creating files that can be of superior quality to the scanned originals.

Complete capture and management platform

From desktop to network to high-volume production scanners... from **Kodak Capture Pro Software** to enhanced integration with **Microsoft SharePoint**... from break/fix service to versatile added-value services, Kodak brings you the broadest total capture and management portfolio available. Hardware, software and service let you easily standardize on a single platform. It's a portfolio that also seamlessly integrates with existing ECM systems and databases.

Enhanced process automation

Superior image quality translates into more accurate data capture, better enabling automatic processes like OCR and IDR. Greater image accuracy dramatically cuts rescanning times and associated costs, while reducing or eliminating manual data entry and the errors that can occur during that process.

Constant innovation for savings

Kodak dedicates significant resources to R&D every year, resulting in products that deliver substantial and critical process savings. As just one example, new **Kodak i5000 Series Scanners** can save up to \$100,000 on total cost of ownership over five years, compared to select non-Kodak scanners.** In addition, consumables costs over five years can be cut by as much as \$46,000 with i5000 Series Scanners.***

Service with global reach and local attention

Kodak
Service & Support

Over 3,000 Kodak-badged employees deliver expert service worldwide on document imaging and storage products from over 100 different manufacturers. A single point of contact enables service efficiencies and savings, while strategically located personnel and parts depots speed response.

* TAWPI 2010 Government Payments and Document Processing Study, public sector survey. Data on file.

** Total cost of ownership (TCO) for i5000 Series Scanner over five years is \$56,460 compared to \$158,364 (multiple units of certain products may be required to match productivity of i5000) for select, competitive, non-Kodak scanners. TCO includes list price, service cost, consumables cost and additional image processing costs. Data on file.

*** Consumables costs over five-year period. i5000 Series Scanner cost of \$10,080 vs. \$56,448 for consumables with select, competitive, non-Kodak scanners. Data on file.

Kodak: single-source advantages

Kodak enables customers to capture and use valuable information from electronic and paper documents. Our document imaging solutions include award-winning scanners and capture software, and industry-leading service and support. From small offices to global operations, Kodak has the right solution to feed your business the information it needs.
